

Spark Plug Cleaning Kit

Use of new Blasting Grit

As part of the continuous improvement of MOTORTECH products, the spark plug cleaning kit (P/N 44.01.023) will soon be supplied with a new blasting grit. In future, MOTORTECH will be using a glass bead blasting grit with a finer grain size of 100 to 200 µm, which has shown even better cleaning performance in the thread and electrode area in internal tests.

FEATURES & BENEFITS

- › Improved performance when cleaning spark plugs without prechamber
- › Gentle cleaning of the electrode and thread area
- › Spherical fine blasting grit made of alkali lime glass for chemically neutral surface treatment
- › Very low iron content - ideal for processing aluminum and stainless steel
- › Environmentally friendly according to DIN ISO 11126-4/G and applicable according to BGR 500 requirements

The new blasting grit will be used in the production of the spark plug cleaning kit from mid of September. MOTORTECH will also exclusively offer the new blasting material for replacement requirements from this date.

ORDERING INFORMATION

Spark Plug Cleaning Kit

P/N	Description	Supersedes
44.01.023	Spark plug cleaning kit inkl. > Spark plug cleaning device with compressed air quick release coupling, blasting grit container and dust collector bag > Cleaning nozzles for M14-, M18, M22 and 7/8" spark plugs > Blasting grit, 1 kg, in separate container (P/N 44.01.027) > Operating manual > Hard shell carrying case with foam insert	

Blasting Grit

P/N	Description	Supersedes
44.01.027	Glass bead blasting grit, 1.0 kg bottle, grain size 100 µm to 200 µm	44.01.009
